github.com/junaid-aiops

Based in: Kerala, India

Seeking roles in: Dubai, UAE

TECHNICAL SKILLS

Programming

Python, C# (Basic), JavaScript (Basic)

Backend Development

FastAPI, REST APIs, Pydantic, CRUD

Databases

PostgreSQL, SQL

Generative AI / LLM

RAG, Prompt Engineering, Embeddings, Vector DBs, LangChain, LangGraph

AI Automation

n8n, Workflow Automation, API Integrations

Tools & Platforms

Git, GitHub, VS Code, Postman, Docker (Basics)

CMS & Web

Umbraco CMS, HTML, CSS (Basics)

EDUCATION

Bachelor of Computer Applications (BCA)

University of Calicut

Graduated: 2023

Relevant Coursework:

Data Structures & Algorithms, Computer Networks, Operating Systems, Software Engineering

Python Backend & GenAI Developer

PROFESSIONAL SUMMARY

Python Backend and GenAI Developer with approximately 1.5 years of hands-on experience in AI/ML development, AI automation, and full-stack AI-assisted application development. Practical background building Retrieval-Augmented Generation (RAG) systems, integrating LLM APIs, and developing automation workflows with n8n. Currently expanding backend expertise through projects using Python, FastAPI, PostgreSQL, LangChain, and LangGraph. Seeking a Python Backend Developer, Junior GenAI Developer, or AI Automation Developer role in Dubai, UAE, to apply and grow these skills.

PROFESSIONAL EXPERIENCE

Software Engineer – AI/ML & Automation

Jul 2024 – Jan 2026

NicorAI Systems Pvt Ltd / 27 Technologies Pvt Ltd

- Contributed to AI/ML development and automation initiatives, supporting applied AI use cases across internal systems.
- Assisted in building and improving RAG-based, AI-supported systems by applying LLM concepts and backend logic.
- Built and maintained AI automation workflows using n8n, including API-based integrations across multiple platforms.
- Contributed to full-stack AI-assisted development, leveraging LLM tools to support both frontend and backend tasks.
- Supported UI/UX design for application screens, contributing to user-friendly interface development.
- Developed and maintained Umbraco CMS-based applications, supporting both frontend and backend functionality.
- Collaborated closely with senior developers and cross-functional team members to deliver project requirements on schedule.

MERN Stack Intern

Jun 2023 – Jan 2024

Luminar Technolab Pvt Ltd, Kochi, Kerala

- Completed structured training and hands-on project work in the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Built front-end and back-end components for web applications, gaining foundational experience in full-stack JavaScript development.

PROJECTS

Plume Studio OS – Wedding Studio Management Backend

In Progress

Python, FastAPI, PostgreSQL, SQLAlchemy/SQLModel, REST API, GitHub

- Designing and building a backend system to manage wedding photography business operations, covering enquiry management, client management, quotation generation, invoicing, payment tracking, and event reminders.
- Architecting the system around real-world business workflows with a clean, maintainable backend structure.
- Planning integration of GenAI features, including an enquiry follow-up assistant, quotation draft assistant, and RAG-based admin assistant.

AI Portfolio Assistant – RAG-Based Personal Portfolio

In Progress

Python, FastAPI, RAG, Vector Database, OpenAI/Gemini API, LangChain

- Developing a personal portfolio website featuring an AI assistant that answers questions about skills, projects, experience, and resume content.
- Implementing a RAG pipeline covering document loading, embedding generation, vector storage, context retrieval, and LLM-based response generation.
- Planning features including a contact form, project Q&A, resume summarization, and a recruiter-focused chatbot.

RAG System Development

Prior Project Experience

Python, LLM API, Embeddings, Vector Search, RAG Pipeline

- Built and contributed to a RAG-based system — covering document loading, chunking, embeddings, vector search, retrieval, and prompt construction — to enable question-answering over company knowledge sources.
